

Decision Rule 1: regret comparison ($m = 10, N = 200, \bar{p} = 0.5$)

- Break-even (uniform spacing) $\kappa = g_{\text{even}}(\delta)$
- - - Sufficient condition $\kappa \geq \frac{9}{10}\Delta_{\min} = 8.82$ pp
- - - Bang-bang envelope $\max_j \varepsilon$ (j optimised)
- $\mathcal{P}_\Delta$ boundary ($\delta = \Delta_{\min} = 9.8$ pp)
